THE GENERATIONS INSTITUTE

March 2016

Foreword

The Quebec Index of Intergenerational Equity was born in 2013 during a conference hosted by the Association of Junior Chambers of Commerce of Quebec (RJCCQ). Inspired by participant enthusiasm for the Index, Carole Beaulieu, editor-in-chief and publisher of *L'actualite*, and Christian Bélair, the former head of the RJCCQ, put their heads together to launch the initiative. Shortly thereafter, and engaged the economist Alexis Gagné to develop the index.

The first edition of the Index was released in March 2014 by *L'actualité* magazine. The Index covered the period from 1976 to 2011, focusing on young Quebecers aged 25 to 34 years. It showed that the kids, or rather young people in the workforce, are alright. Intergenerational equity, measured via the index, has generally improved for Generations X and Y compared to baby boomers. However, the sustainability of this progression in quality of life faces significant threats from global warming and changes to Quebec public policy due to fiscal constraints – either through tax increases or cuts in services.

Emboldened by the success of the first Index of Intergenerational Equity, Alexis Gagné, Maripier Isabelle, Christian Bélair, Laura O’Laughlin and Isabelle Fontaine, decided to form a nonprofit institute named the Generations Institute. The Generations Institute launched other initiatives including the Youth Budget, in collaboration with *L'actualité* in March 2015, and updated the “Manifesto for a Lucid Quebec” on its 10-year anniversary, the results of which were published in *Les Affaires* in October 2015.

For the 2016 edition of the Index of Intergenerational Equity, members of the Institute wanted to extend the index to other Canadian provinces. Together with their advisory board, the Generations Institute refined, updated, and extended the Index. As for the comparison with other Canadian provinces, data availability and workload have only temporarily curbed their enthusiasm, restraining the 2016 edition to a comparison between Quebec and Ontario.

The Generations Institute (L’Institut des générations)

The Generations Institute (the “Institute”) is a non-profit organization, with the mission is to create and disseminate tools, analysis, and proposals on issues related to intergenerational equity. Its primary objective is to stimulate and inform discussions on these issues in an open, non-partisan way.

The Generations Institute was created by Quebecers from different generations and different political beliefs. All members unanimously agree on the importance of improving the quality of life – both economically and socially – across all generations.

The Generations Institute is an independent non-profit organization. All members, including the advisory board, contribute their time on a voluntary basis.

A Few Words of Thanks

The team from the Generations Institute would like to thank the participants in the 2012 focus groups, which have greatly assisted our thinking on the complex subject of intergenerational equity. We specifically wish to thank Réjean Parent, Pierre Fortin, Monique Jérôme-Forget, Harvey Mead, Marcel Côté, Fabrice Vil, Marie-Christine Demers, Jonathan Gagnon, Daniel Bouchard, Michael Bérubé and Maude Gravel.

We are indebted to the ideas and comments of the Generations Institute's Advisory Committee, which allowed us to significantly improve the 2016 index. This committee is composed of Louise Harel, Réjean Parent, François Vaillancourt, Pierre Fortin, Marcelin Joanis and Monsef Derraji.

We also wish to thank several individuals who shared their time and expertise to assist us in collecting data. The work could have been done without them. We would like to thank Stéphane Crespo, Jonathan Fortier, Marcel Boudreau, Marie-Claude Giguère, David Boucher, Marc-André Gauthier, Leanne Thompson and the team of Spencer Stuart Board Index.

We would particularly like to thank Carole Beaulieu, Charles Grandmont, and Jonathan Trudel of *L'actualité*, whose insightful comments during the development, research, and analysis phases of the process have greatly contributed to its improvement.

Finally, we would like to thank HPJ Solutions, Ryan Affaires Publiques, Analysis Group (Groupe d'Analyse), CIRANO, and CREDO for their generous assistance with the Generations Institute.

Introduction

The 2016 edition of the Index of Intergenerational Equity (Index) quantitatively assesses the evolution of intergenerational equity, measuring the impact of public policy decisions over the last 37 years. Covering the period from 1976 to 2013 and focusing on young people aged 25 to 34 years, we added an additional dimension in 2016: a comparison between Quebec and Ontario.

Our analysis aims to explore the evolution of certain indicators and their distribution between generations over recent decades. These indicators can be thought of as a measure of the costs and benefits associated with public policy and political choices. As a “cost” for one person may be a “benefit” for another, the selection of indicators and their classification into costs and benefits is not a simple, universal process. Therefore, the composition and classification of the Index is the result of two focus groups, one with youth aged 20 to 35 and the second with people aged 55 and over. We also conducted a series of informal consultations with Quebecers of all ages from all political backgrounds, involved in various spheres of activity, with varying experiences, and all mobilized by the issue of equity between generations.

The composition of the 2016 edition of the Index is slightly different from the first edition. We hope it is a change for the better. Regardless, the following two interrelated issues remain at the core of the Index:

1. Has the living standard of young people improved or deteriorated?
2. Have power, wealth, and jobs been shared more or less equally across generations?

To answer these questions as accurately as possible, we collected 26 socio-economic indicators (see the section “The Indicators” for further details) and combined them to form the Index of Intergenerational Equity. These were divided into two groups. The first group of 16 indicators aims to answer the first question by analyzing different factors contributing to the standard of living of individuals. The second group of 10 indicators answers the second question, and as such, is more focused on analyzing the sharing of power and wealth. We trace the individual and joint evolution of these 26 indicators over the 1976-2013 time period, using 1990 as the reference year. This year, the Index is an analysis in two dimensions: first comparing the relative standard of living for young people against their parents’ generation, and then comparing this relative standard of living between Quebec and Ontario. The evolution of the Index is summarized in the table below:

We would have also liked the Index to cover some additional dimensions, and in particular, certain environmental indicators. Unfortunately, the data were simply not available in sufficient quantity and quality. It is also important to note that four indicators are calculated only for Québec, as their Ontario equivalent unfortunately cannot be calculated under the available resources.

Finally, we believe that Canadians would benefit greatly from more studies of intergenerational equity. One of the last in-depth studies of the subject was directed by Miles Corak for Statistics Canada in 1998. This type of analysis contributes greatly to the discussions on intergenerational equity. Other research, related to the concept of generational accounting, presented in the works of Kotlikoff and in a study in the Canadian context by Vaillancourt and Oreopoulous in 1998, would ideally be renewed every five years. Such exercises allow, among others, to estimate the tax rates that different generations have or will incur in order to maintain their standard of living

Methodology

As mentioned in the introduction, the Index addresses two core questions:

1. Has the living standard of young people improved or deteriorated?
2. Have power, wealth, and jobs been shared more or less equally across generations?

26 indicators were selected for this version of the index. These indicators therefore aim to cover all aspects of an analysis related to these two questions, whether economic, social or other. As previously mentioned, the Index traces the evolution of these indicators as they relate the well-being of young people aged 25 to 34, over the 1976 to 2013 time period. We selected 1990 as the base year because many indicators became available at this time. Additionally, the 23-year period between 1990 and 2013 nearly represents the typical 25-year period that marks a generation.

The Index uses 26 indicators, plus an additional four indicators available only for Quebec. We separate these indicators into two categories that answer the two core questions.

Question 1: Living Standards and Young People (25-34):

1. Median income after tax, 25 to 34
2. Unemployment rate, 25 to 34
3. Average length of unemployment spells (in weeks), 25 and 34
4. Average number of hours worked, 25 to 34 years +
5. Pay equity: Weekly salary of women aged 25 to 34 / weekly salary of men aged 25 to 34
6. Income inequality: Gini coefficient, 25 and 34
7. Median net assets, 25 and 34
8. Ratio of average house prices and median income after tax, 25 to 34
9. Ratio of average rent for a 2 bedroom and the median after-tax monthly, 25 to 34
10. Crime rate per 100 000 population (excluding traffic violations)
11. High school graduation rate, 25 to 34
12. University graduation rate, 25 to 34
13. Life expectancy at birth
14. Stock of provincial public infrastructure as a percentage of GDP
15. Overall Satisfaction with regard to life in the 25 to 34 years
16. Rates of major depression in the past year and perception of mental health for 25 to 34

Question 2: Sharing of power, wealth, and employment opportunities

17. Ratio of median income after tax, 25 to 34 years and the median after-tax income, 16+
18. Ratio of the unemployment rate for 25 to 34 years and the unemployment rate, 15+
19. Ratio of median net assets of 25 to 34 years and the median net assets, 16+
20. Ratio of average tax rate, 25 to 34 and the average tax rate, 16 years and over (average before tax - average after-tax income / average before tax income)
21. Gross (Quebec) or net (Ontario) debt of the provincial government as a percentage of GDP (Quebec and Ontario not comparable)

22. Percentage of GDP up to provincial education spending
23. Percentage of GDP going to the provincial health spending
24. *Percentage of GDP going to provincial spending on childcare (Quebec only)*
25. Percentage of GDP going to provincial spending on debt service
26. *Average age of MNAs after each election (Quebec only)*
27. Average age of board members of large companies
28. Emissions of greenhouse gas (megatonnes of CO₂ equivalent)
29. Concentration of fine particles in southern Quebec and southern Ontario
30. *Water quality at the mouth of the main southern watersheds (Quebec only)*

Grayed indicators are new in the 2016 edition of the Index. Italicized indicators are available for Quebec only and are not included in any comparison with Ontario.

The 26 indicators available for both Quebec and Ontario are aggregated into a single Index of Intergenerational Equity by a simple process:

1. Each indicator is converted with a base equal to 100, with the base year of 1990=100.¹
2. A weight of 4 was given to two indicators: (i) median income and (ii) income inequality.² A $\frac{1}{4}$ weight was assigned to two other indicators (i) crime rate and (ii) University graduation rates.³
3. A weighted average is then calculated.

¹ This index increases or decreases in parallel and proportionally to the changes in the indicator, if the increase of the indicator is positive for equity. If the increase of the indicator is detrimental to equity, the associated index increases and decreases in the opposite direction of the indicator. For example, if the unemployment rate increased from 5% in the base year to 10%, the index will decrease from 100 to 50.

² These two indicators are considered very important by the authors. As they do not fluctuate rapidly, the impact on the index as a whole is seen as insufficient.

³ These two indicators are considered important, but their major variation observed during the period of interest made their impact on the index too large.

The 2016 Index: Key Findings

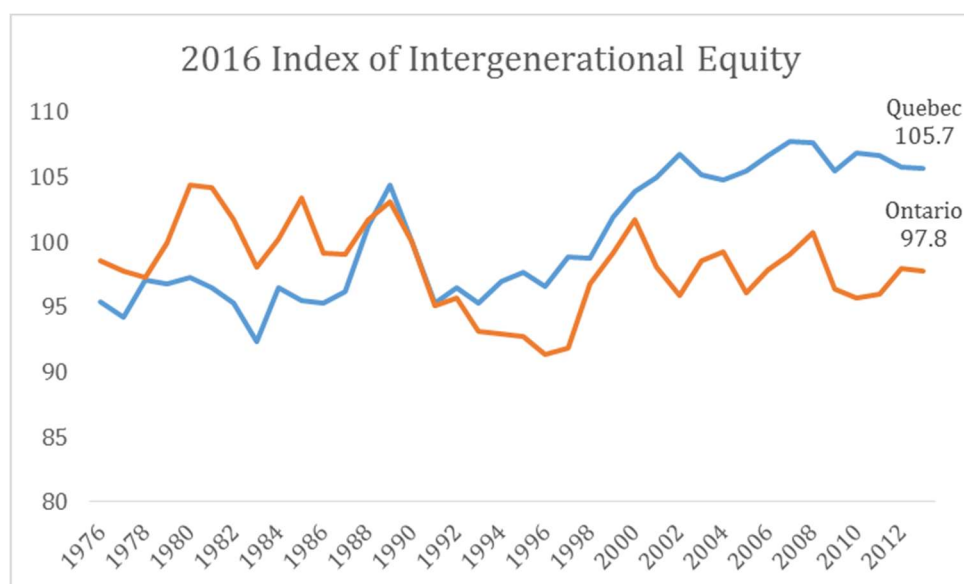

Table 1 - Index of Intergenerational Equity : Québec - Ontario Comparison

Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
1976	95.4	98.6	1989	104.4	103.1	2002	106.8	95.9
1977	94.2	97.7	1990	100.0	100.0	2003	105.2	98.6
1978	97.1	97.3	1991	95.3	95.1	2004	104.8	99.3
1979	96.8	100.0	1992	96.5	95.7	2005	105.5	96.1
1980	97.3	104.4	1993	95.3	93.1	2006	106.7	97.9
1981	96.5	104.2	1994	97.0	92.9	2007	107.7	99.0
1982	95.3	101.7	1995	97.7	92.7	2008	107.7	100.7
1983	92.3	98.1	1996	96.6	91.3	2009	105.5	96.3
1984	96.5	100.3	1997	98.9	91.8	2010	106.9	95.7
1985	95.5	103.4	1998	98.8	96.8	2011	106.6	96.0
1986	95.3	99.2	1999	101.9	99.1	2012	105.8	98.0
1987	96.2	99.1	2000	103.8	101.7	2013	105.7	97.8
1988	101.3	101.7	2001	105.0	98.1			

Due to data availability, the last year in the 2016 Index is 2013. Accordingly, the 2013 value of the IEG is the most recent comparison of living standards and resource-sharing between the generation of young people aged 25 to 34 (Generations X and Y) and their parents' generation (Baby-boomers).

Our analysis suggests the following:

- In Quebec, the Index has *increased* from 100 to 105.7 between 1990 and 2013, indicating an improved quality of life and resource-sharing for Quebec's younger working generation. In other words, a fragile equity exists between 25-34 year-olds in Québec and their parents' generation.
- In Ontario, Index has *decreased* from 100 to 97.8 between 1990 and 2013, indicating a deterioration in standard of living and resource-sharing for Ontario's younger

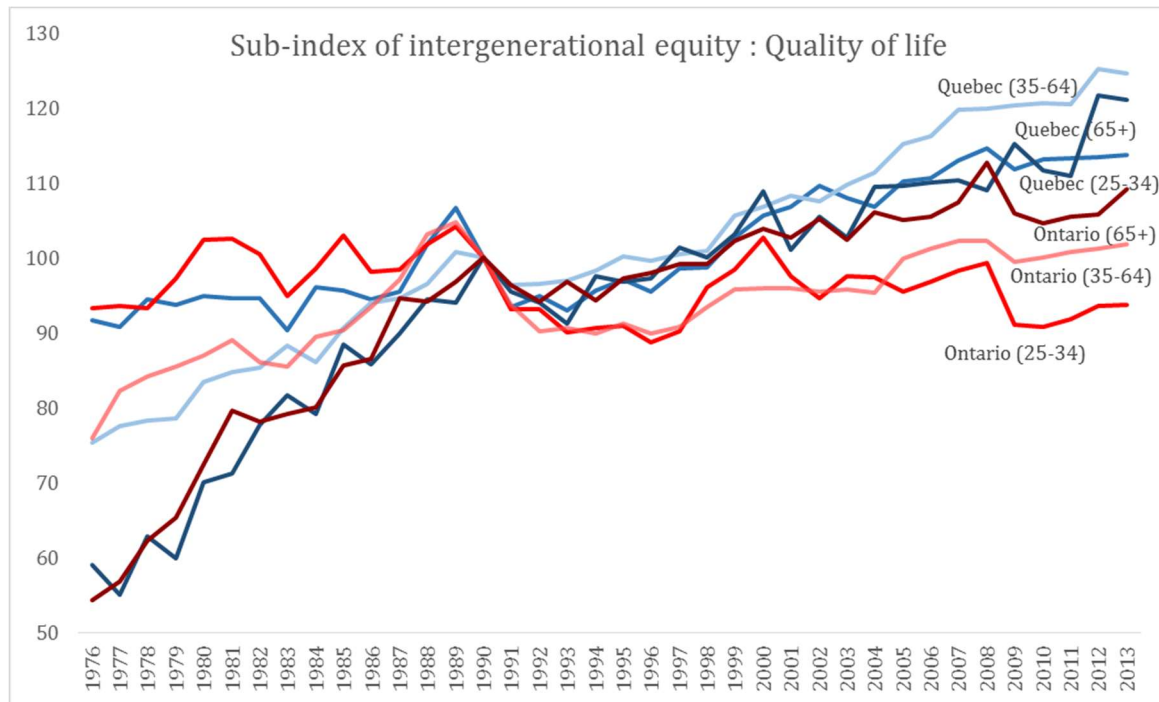

working generation. The living standards of young people seem to have deteriorated slightly compared to the generation of their parents.

- The indicators with the greatest *positive* impact on the Index in Quebec are:
 - Crime rate (decrease from 6,207 to 3,861 infractions per 100,000 people)
 - University graduation rate (increase from 14.4% to 31% of the population)
 - Unemployment rate (10.7% to 7.24%)
 - Median income (\$ 24,853 to \$ 31,389)
 - Median Net assets (\$ 33,631 to \$ 43,259)
- The indicators with the greatest *negative* impact on the Index in Quebec are:
 - Mental health (constructed index of 100 to 53)⁴
 - Ratio of net assets of 25-34 year olds to the population as a whole (34% to 22%)
 - Ratio of house prices to income (6.19 to 8.41)
- The indicators with the greatest *positive* impact on the Index in Ontario are:
 - Crime rate (decrease from 7,019 to 3,675 infractions per 100,000 people)
 - University graduation rate (increase from 17.9% to 35.7% of the population)
 - Air quality – fine particulate matter (decrease from 8.36 to 5.88 micrograms per cubic meter)
 - Public provincial Education spending as a percent of provincial budget (3.7% to 4.6% of population with a university degree)
 - Ratio of average tax rate across generations (.98 to .83)
- The indicators with the greatest *negative* impact on the Index in Ontario are:
 - Mental health level (constructed index, with a deterioration of 100 to 55.9)
 - Unemployment duration, in weeks (13.5 to 20.35)
 - Ratio house prices / income (9.15 to 12.96)
- The indicators with the greatest Quebec – Ontario divergence between 1990 and 2013 (in Quebec’s favour) are:
 - Median Income:
 - Québec: \$ 24,853 to \$ 31,389
 - Ontario: \$ 29,405 to \$ 29,701
 - Unemployment rate:
 - Quebec: 10.66% 7.2%
 - Ontario: 6.7% to 7.7%
 - Average duration of unemployment spells:
 - Quebec: 19.6 to 15.9 weeks
 - Ontario: 13.5 to 20.4 weeks
- The indicators with the greatest Quebec – Ontario divergence between 1990 and 2013 (in Ontario’s favour) are:
 - Air Quality (micrograms per cubic meter of fine particulate matter)
 - Quebec: 7.2 to 9.4

⁴ It is important to note that the sharp deterioration in this indicator might partly be due to a change in culture that has made mental health problems less taboo. Thus, the deterioration in the mental health indicator may simply be due to increased reporting and recognition

- Ontario: 8.4 to 5.9
 - Public expenditure on education as percentage of GDP:
 - Quebec: 6% to 5.2%
 - Ontario: 3.7% to 4.6%
 - Intergenerational ratio of average tax rates:
 - Quebec: 1.02 to 0.99
 - Ontario: 0.98 to 0.83
- The fact that the Index is higher in Quebec than in Ontario does not necessarily mean that the standard of living and sharing of resources among youth aged 25 to 34 is higher in Quebec compared to Ontario. Indeed, the Index studies the evolution and not the absolute level of the standard of living and sharing of resources.
- The data nonetheless permit a direct comparison. A look at the *level* of the 26 indicators that compose the Index for the years 2012 and 2013 further suggests that young Quebecers' have a standard of living that exceeds that of their Ontarian counterparts. Of the 26 indicators available for 2012 and 2013, 13 were in favor of young Quebecers, 11 in favor of Ontarian youth – and many of these in key areas, including:
 - A higher median income;
 - A lower unemployment rate;
 - A shorter average period of unemployment;
 - A lower level of income inequality.

For comparison purposes, we calculate a sub-index only on the first 16 indicators related to quality of life for three age groups: 25-34 years, 35-64 years, and 65 and over. The results are presented below:

The evolution of the index for each of these groups indicate that between 1990 and 2013, Quebecers aged 35 to 64 and 65+ have seen their standard of living increase the most rapidly. Only Ontarians aged 25 to 34 have seen a decline in living standards.

In the next section, we present the evolution of each of the 26 key indicators and the 4 indicators available for Quebec only. All the indicators and data used to compose these indicators in dollars are in real 2012 dollars.⁵ Specifically, the next section contains, for each indicator:

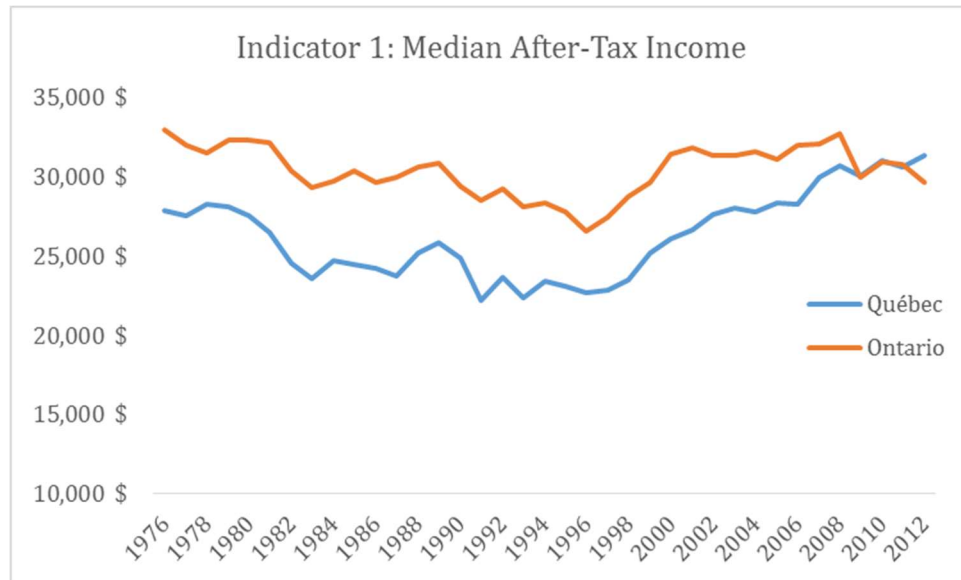

- The definition of the indicator;
- The source or sources of the data;
- The annual value of the indicator for the 25 to 34 age group, in both Quebec and Ontario;
- A graphic comparison between Quebec and Ontario.

All data for other age groups are attached in an annex.

⁵ For price indices, Table 326-0021, Statistics Canada, special compilation, Institute of Statistics of Quebec

1988	34.78	34.58	2001	33.96	38.09			

Description: This indicator represents the evolution of the Gini coefficient, calculated using after-tax income. The Gini coefficient is a widely-used measure of income inequality, where the value of 1 represents perfect inequality and 0 represents perfect equality (all people have exactly the same after-tax income).

1997	40.58%	41.67%	2005	39.52%	41.10%	2013	39.18%	40.73%

Description: This index represents the net stock of public infrastructure in current dollars, as a percentage of GDP in current dollars. It includes the infrastructure of all types and all three levels of government (municipal, provincial, federal).

Source: Stock of provincial public infrastructure: Statistics Canada, CANSIM Table 031-0005, Gross Domestic Product: Statistics Canada, CANSIM table 384-0037

Indicator 15: Self-reported general life satisfaction

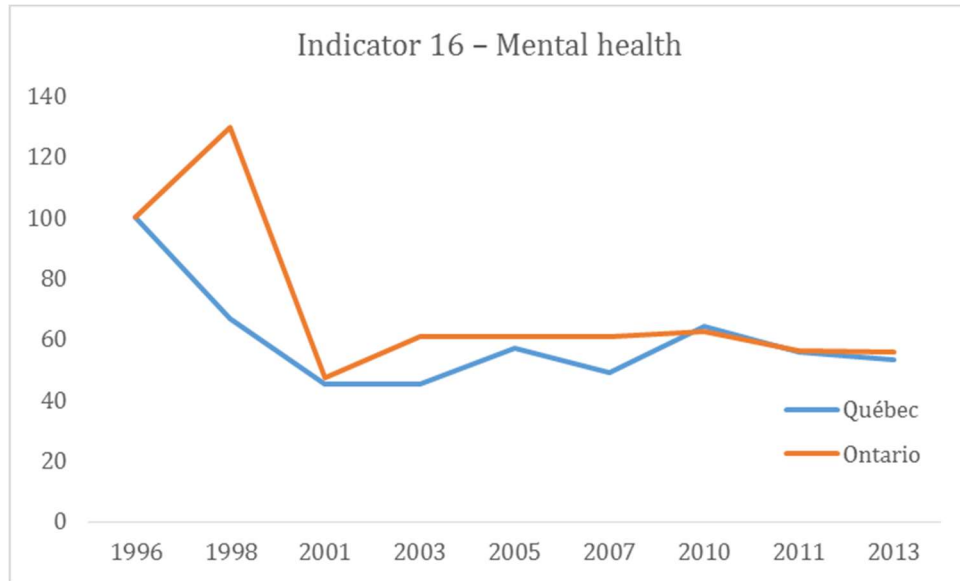

Indicator 15 - Self-reported general life satisfaction								
Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
1985	8.10	8.10	2003	8.08	7.97	2011	7.76	7.49
1989	8.77	8.83	2005	7.84	7.62	2013	7.87	7.60
1991	8.99	9.26	2008	8.02	7.82			
1996	8.50	8.56	2010	7.66	7.53			

Description: This indicator collects the answers to the question of the GSS: How do you feel about your life in general? This same question was posed with two different scales (1-4, very dissatisfied to very satisfied, 1-10, very dissatisfied to very satisfied). The authors have converted the scale of 1-4 to a scale of 1 to 10.

1991	7.21%	6.23%	2002	6.55%	5.51%	2013	8.11%	7.30%

Description: This indicator represents the provincial government spending in current dollars in health as a percentage of GDP in revenues in current dollars.

Source: Expenditures: Canadian Institute for Health Information, Gross Domestic Product: Statistics Canada, CANSIM table 384-0037

Indicator 24: Percentage of provincial GDP allocated to provincial early childhood and daycare spending

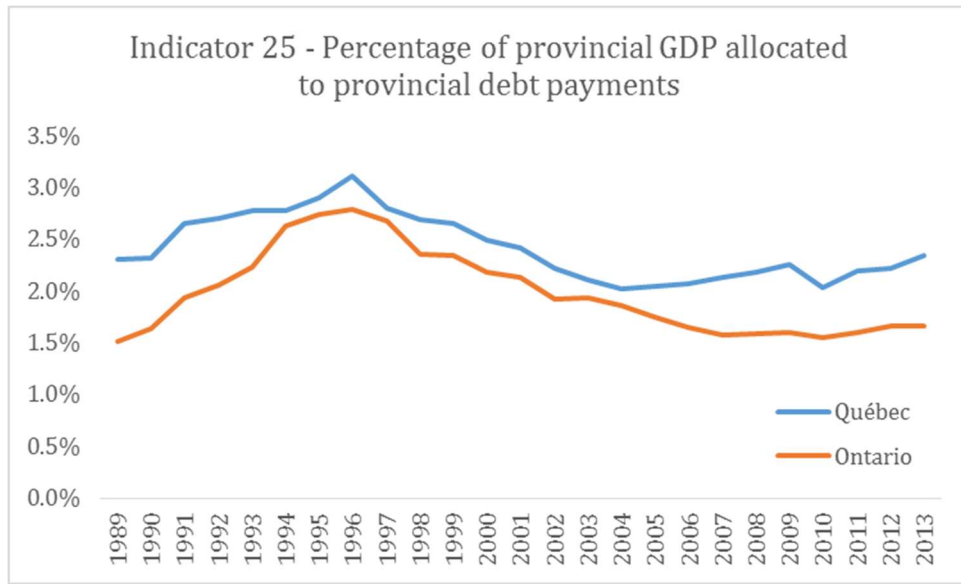

Indicator 24 - Percentage of provincial GDP allocated to provincial early childhood and daycare spending					
Année	Québec	Année	Québec	Année	Québec
1997	0.22%	2003	0.52%	2009	0.66%
1998	0.25%	2004	0.55%	2010	0.68%
1999	0.28%	2005	0.56%	2011	0.72%
2000	0.33%	2006	0.56%	2012	0.80%
2001	0.41%	2007	0.57%	2013	0.81%
2002	0.48%	2008	0.60%		

Description: This index represents the provincial government spending in current dollars by going to daycares / early childhood education as percentage of GDP in revenues in current dollars. Spending is obtained by summing the expenditures of the Ministry of Family to the amount of the tax credit to childcare costs from the Quebec government.

Source: Expenditures: Ministry of Finance of Quebec, Gross Domestic Product: Statistics Canada, CANSIM table 384-0037

Indicator 25: Percentage of provincial GDP allocated to provincial debt payments

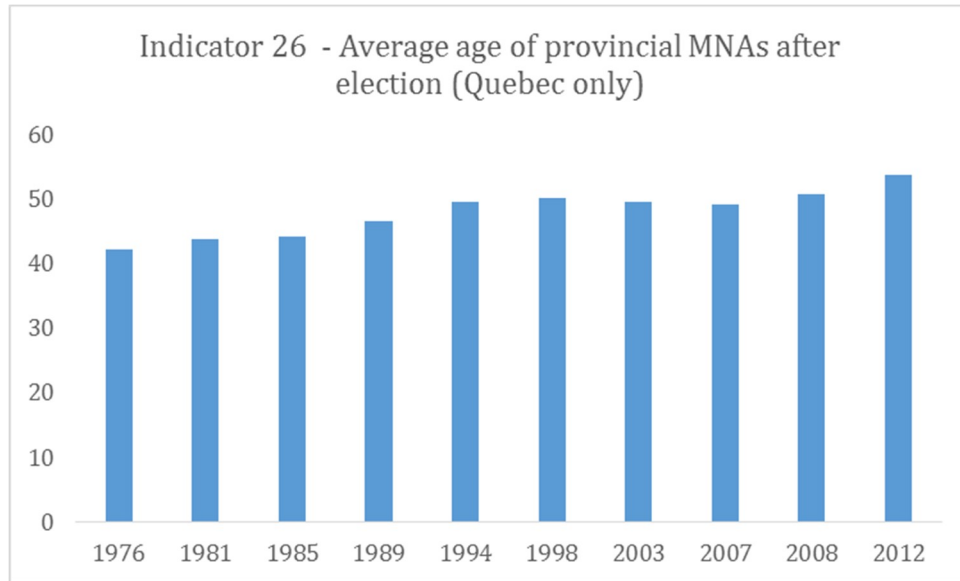

Indice 25 - Percentage of provincial GDP allocated to provincial debt payments								
Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
1989	2.31%	1.51%	1998	2.68%	2.36%	2007	2.13%	1.57%
1990	2.31%	1.64%	1999	2.64%	2.34%	2008	2.18%	1.59%
1991	2.65%	1.93%	2000	2.49%	2.18%	2009	2.25%	1.60%
1992	2.70%	2.05%	2001	2.41%	2.13%	2010	2.03%	1.54%
1993	2.78%	2.23%	2002	2.22%	1.92%	2011	2.19%	1.60%
1994	2.77%	2.62%	2003	2.10%	1.93%	2012	2.21%	1.65%
1995	2.90%	2.74%	2004	2.02%	1.86%	2013	2.34%	1.66%
1996	3.11%	2.78%	2005	2.04%	1.75%			
1997	2.80%	2.67%	2006	2.07%	1.65%			

Description: This index represents provincial government spending in current dollars in debt service as a percentage of GDP in current dollars.

Source: Expenditures: Ministry of Finance of Quebec, Gross Domestic Product: Statistics Canada, CANSIM table 384-0037

Indicator 26: Average age of provincial MNAs after election (Quebec only)

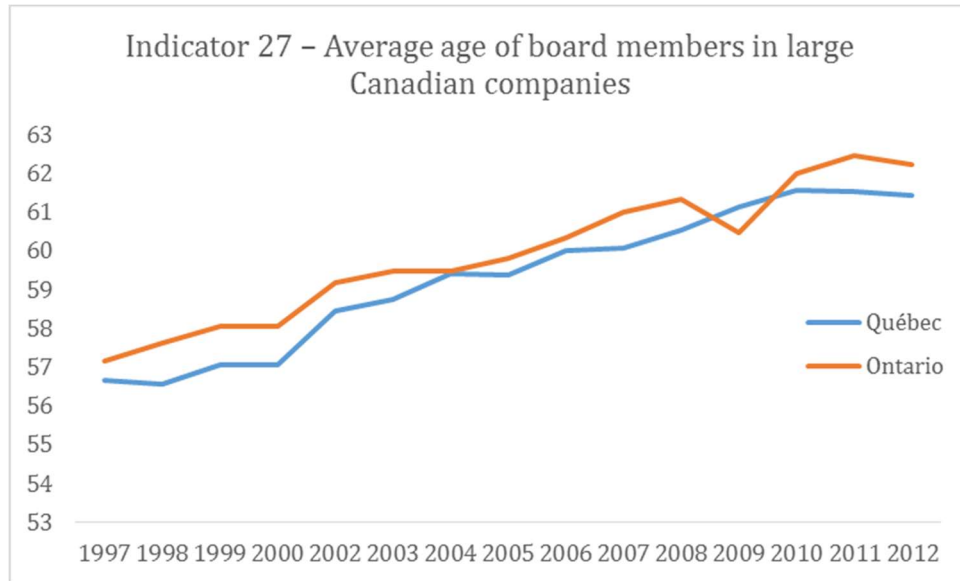

Indicator 26 - Average age of provincial MNAs after election					
Année	Québec	Année	Québec	Année	Québec
1976	42.20	1994	49.60	2008	50.80
1981	43.80	1998	50.10	2012	53.70
1985	44.10	2003	49.60		
1989	46.50	2007	49.10		

Description: This indicator represents the average age of MNAs after each election.

Source: Library of the Quebec National Assembly

Indicator 27: Average age of board members in large Canadian companies

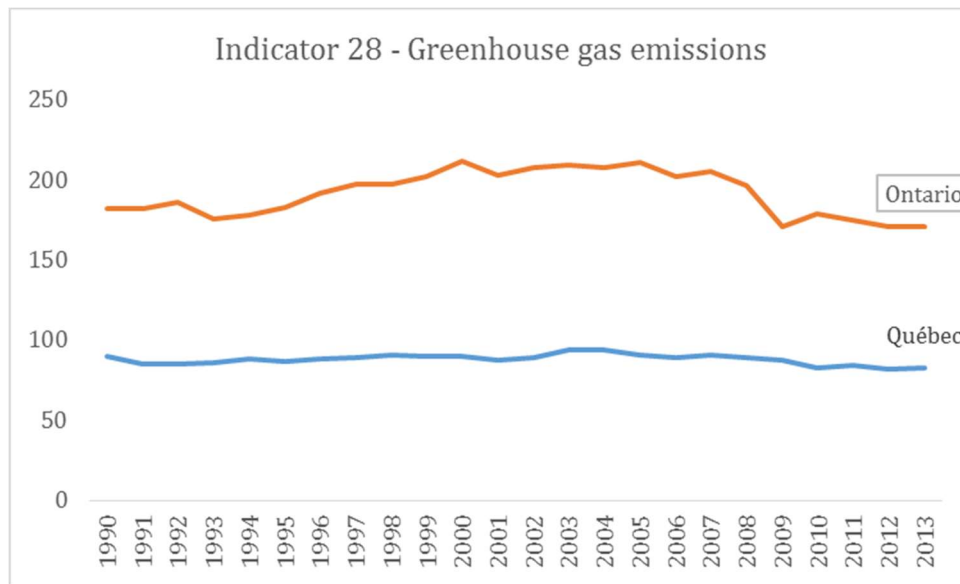

Indicator 27 - Average age of board members in large Canadian companies								
Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
1997	56.66	57.15	2003	58.73	59.48	2009	61.12	60.46
1998	56.56	57.61	2004	59.40	59.46	2010	61.55	61.98
1999	57.05	58.05	2005	59.38	59.80	2011	61.51	62.43
2000	57.05	58.05	2006	60.02	60.34	2012	61.42	62.21
2001	58.08	58.79	2007	60.06	61.01			
2002	58.45	59.18	2008	60.54	61.32			

Description: This indicator represents the average age of the directors of large companies headquartered in the relevant province. For the years 1997 to 2003, the term of office is used to predict the age, which is not available in the Spencer Stuart data from 2004.

Source: Spencer Stuart Board Index, authors' calculations

Indicator 28: Greenhouse gas emissions (megatonnes of CO2-equivalent)

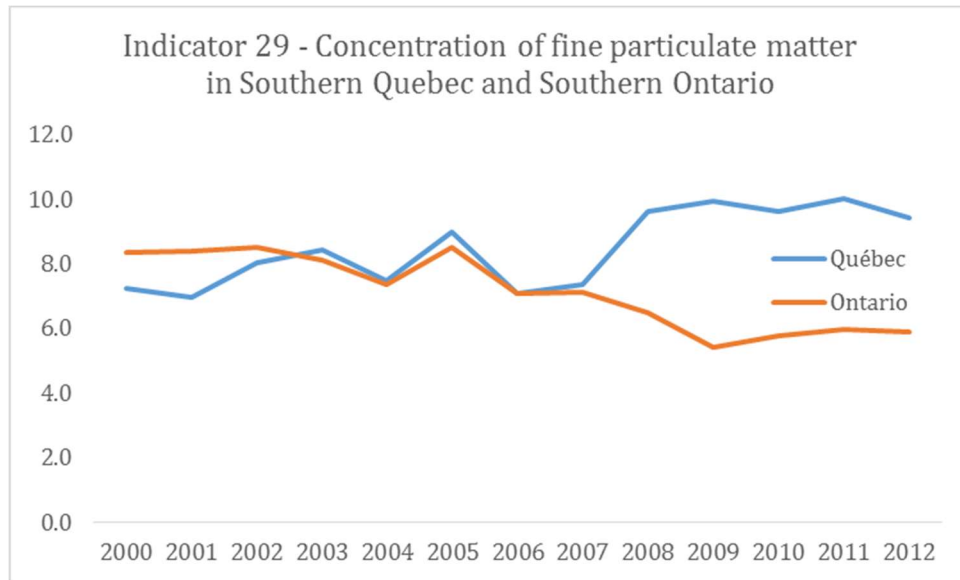

Indicator 28 - Greenhouse gas emissions (megatonnes of CO2-equivalent)								
Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
1990	89.79	182.05	1998	90.56	197.18	2006	88.82	201.91
1991	84.69	181.96	1999	89.80	201.96	2007	90.34	205.49
1992	84.62	185.52	2000	89.67	211.25	2008	88.72	196.29
1993	85.75	175.60	2001	87.45	202.69	2009	87.56	171.03
1994	88.01	177.72	2002	89.26	207.65	2010	82.67	178.34
1995	86.89	182.67	2003	93.55	209.27	2011	84.17	174.65
1996	88.27	191.16	2004	94.07	207.59	2012	81.64	170.90
1997	88.63	196.71	2005	90.20	210.96	2013	82.65	170.77

Description: This indicator represents the emission of greenhouse gases in Quebec in gigatonnes of carbon dioxide equivalent.

Source: Climate Change Connection, http://climatechangeconnection.org/wp-content/uploads/2014/08/Canada_GHG_emissions_trend_by_province_1990-2013.pdf

Indicator 29: Concentration of fine particulate matter in Southern Quebec and Southern Ontario

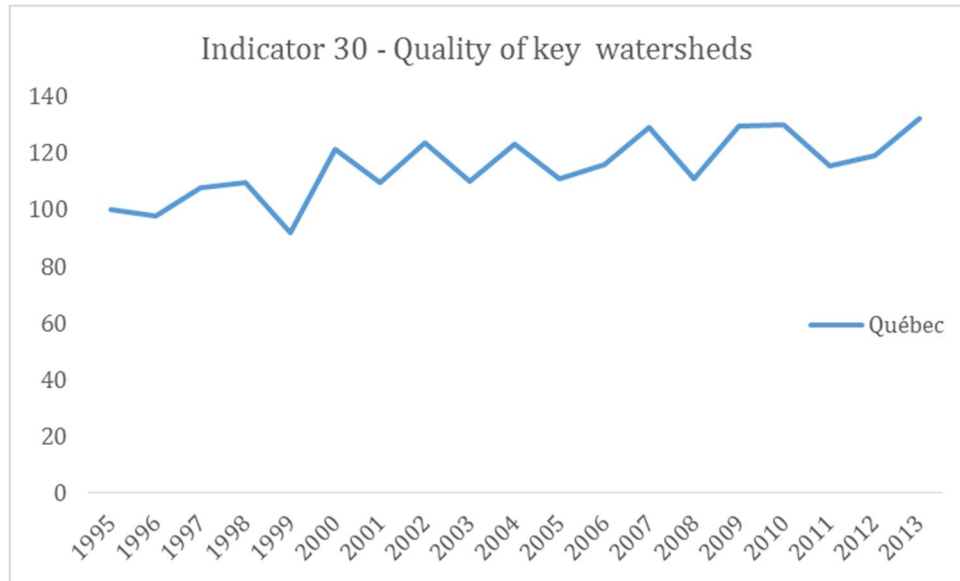

Indicator 29 - Concentration of fine particulate matter in Southern Québec and Southern Ontario								
Année	Québec	Ontario	Année	Québec	Ontario	Année	Québec	Ontario
2000	7.22	8.36	2005	9.00	8.50	2010	9.60	5.76
2001	6.97	8.37	2006	7.06	7.06	2011	10.03	5.95
2002	8.02	8.52	2007	7.34	7.10	2012	9.41	5.88
2003	8.43	8.11	2008	9.63	6.47			
2004	7.47	7.35	2009	9.94	5.40			

Description: This indicator represents the concentration of fine particles (less than 2.5 microns) in micrograms per cubic meter.

Source: Data on air quality, Environment Canada

Indicator 30: Quality of key watersheds (Quebec)

Indicator 30 - Quality of key watersheds					
Année	Québec	Année	Québec	Année	Québec
1995	100.00	2002	123.50	2009	129.35
1996	97.97	2003	109.84	2010	129.79
1997	107.81	2004	123.11	2011	115.34
1998	109.46	2005	110.88	2012	119.29
1999	91.97	2006	115.99	2013	132.13
2000	121.40	2007	129.13		
2001	109.53	2008	110.88		

Description: This indicator is a composite index combining 3 water quality indicators at the mouth of the main southern watersheds: fecal coliform, phosphorus and suspended solids. An increase in the indicator is an improvement of the water quality.
